

# Laravel 5.3

## CODECASTS (Fábio Vedovelli)

[https://www.youtube.com/watch?v=25JnwUAH99U&list=PLy5T05I\\_eQYM4-B6W374JkAuh\\_wOrs3Pi](https://www.youtube.com/watch?v=25JnwUAH99U&list=PLy5T05I_eQYM4-B6W374JkAuh_wOrs3Pi)

Resumo do curso feito por Roberto Pinheiro

## Aula 01 - Introdução

### Framework Laravel

É uma caixa de ferramentas que serve para trabalhar com PHP.

O Laravel permite criar de uma forma muito rápida um CRUD protegido por senha

### O que será visto no curso

- Artisan
- Database
  - Migrations, Factories, Seeds
  - Eloquent, Query Builder e Collections
  - Relationship
- Helpers
- Routes e Middleware

- Requests, Responses e Flash Messages
- Views, Layouts e Assets
- Forms e Validation
- Debug
- Controllers e Repositories
- Cache
- Elixir

## Aula 02 - Criando o projeto

A instalação é feita através de uma ferramenta chamada **Composer**, que é um gerenciador de dependências para o PHP.

Instale o **Composer** em seu computador.

Há duas formas de instalar o Laravel:

### Via Laravel Installer

O comando a seguir instala, de forma global, o Laravel no computador.

```
composer global require laravel/installer
```

O comando a seguir cria o projeto:

```
laravel new <nome_projeto>
```

### Via Composer Create-Project

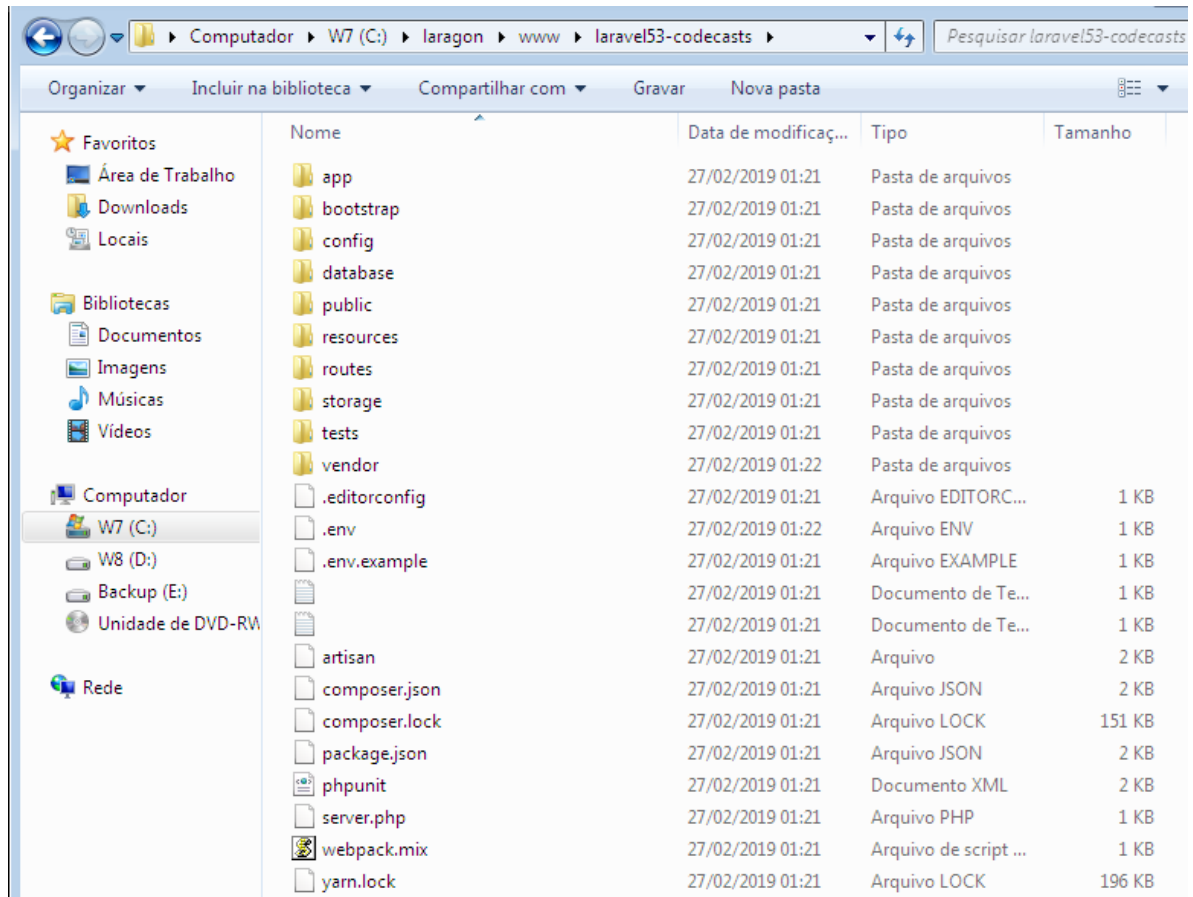

O comando abaixo instala o Laravel e cria o projeto na pasta ativa:

```
composer create-project --prefer-dist laravel/laravel <nome_projeto>
```

## Instalação do Laravel e criação do projeto

composer global require laravel/installer

laravel new laravel53-codecasts

## Aula 05 - Planejamento

Será desenvolvido uma aplicação para controle de clientes e suas compras.

A aplicação precisa de um nome!

O que é necessário criar para que a funcionalidade dos clientes seja completa:

### CLIENTES (Customers)

- Migrations
- Model
- Factory
- Seed
- Routes
- Controller
- Views
- LaravelCollective/  
HTML
- Validator
- Repositório
- Serviço

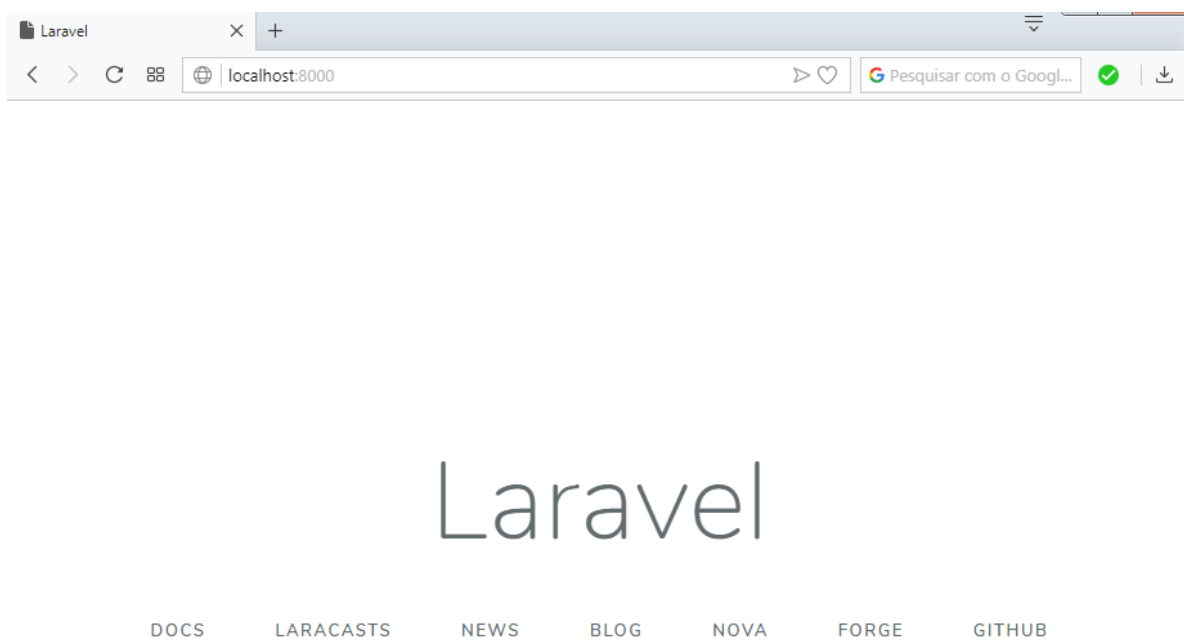

## Aula 06 - Nomear a aplicação

### Iniciando o servidor

`php artisan serve`

No browser:

`localhost:8000`

### Terminal Bash no Windows

Para a permitir que várias versões do Microsoft Windows possam, de certa forma, agir como um sistema Unix você pode experimentar o **CygWin**, que é uma coleção de ferramentas de software livre originalmente desenvolvidas por **Cygnus Solutions**. Sua principal intenção é portar softwares que rodam em sistemas **POSIX** (como sistemas Linux, sistemas **BSD**, e sistemas Unix) para que rodem em Windows com pouco mais do que uma recompilação. O Cygwin é atualmente mantido por funcionários da Red Hat e outras pessoas.

## Usando o Bash para filtrar comandos do artisan

php artisan | grep name

```
/cygdrive/c/laragon/www/laravel53-codecasts

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan | grep name
  app:name                Set the application namespace

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

php artisan | grep make

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan | grep make
make
make:auth                Scaffold basic login and registration views and routes
make:channel              Create a new channel class
make:command              Create a new Artisan command
make:controller           Create a new controller class
make:event                Create a new event class
make:exception            Create a new custom exception class
make:factory              Create a new model factory
make:job                  Create a new job class
make:listener             Create a new event listener class
make:mail                 Create a new email class
make:middleware           Create a new middleware class
make:migration            Create a new migration file
make:model                Create a new Eloquent model class
make:notification         Create a new notification class
make:observer             Create a new observer class
make:policy               Create a new policy class
make:provider             Create a new service provider class
make:request              Create a new form request class
make:resource             Create a new resource
make:rule                 Create a new validation rule
make:seeder               Create a new seeder class
make:test                 Create a new test class

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

# Aula 07 - Migrations - Overview

## Criando o banco de dados

Acesse o phpmyadmin e crie o banco de dados com o nome **laravel53-codecasts**

## Configurando o acesso ao banco de dados

### Arquivo .env

```
DB_CONNECTION=mysql
DB_HOST=localhost
DB_PORT=3306
DB_DATABASE=laravel53-codecasts
DB_USERNAME=root
DB_PASSWORD=
```

## Migrations padrões

O Laravel já vem com duas migrations padrões:

```
2014_10_12_000000_create_users_table.php
2014_10_12_100000_create_password_resets_table.php
```

**database/migrations/2014\_10\_12\_000000\_create\_users\_table.php**

```
<?php
```

```
use Illuminate\Support\Facades\Schema;
use Illuminate\Database\Schema\Blueprint;
use Illuminate\Database\Migrations\Migration;
```

```
class CreateUsersTable extends Migration
{
    /**
     * Run the migrations.
     *
     * @return void
     */
    public function up()
    {
        Schema::create('users', function (Blueprint $table) {
            $table->bigIncrements('id');
            $table->string('name');
            $table->string('email')->unique();
            $table->timestamp('email_verified_at')->nullable();
            $table->string('password');
            $table->rememberToken();
            $table->timestamps();
        });
    }

    /**
     * Reverse the migrations.
     *
     * @return void
     */
    public function down()
    {
        Schema::dropIfExists('users');
    }
}
```

## Criando as tabelas

Para criar as tabelas:

`php artisan migrate`

```
[>> php artisan migrate  
Migration table created successfully.  
Migrated: 2014_10_12_000000_create_users_table  
Migrated: 2014_10_12_100000_create_password_resets_table
```

## Apagando as tabelas

Para voltar atrás e remover as tabelas:

`php artisan migrate:rollback`

```
/Users/vedovelli/Codecasts/basico  
>> php artisan migrate:rollback  
Rolled back: 2014_10_12_100000_create_password_resets_table  
Rolled back: 2014_10_12_000000_create_users_table
```

## Tipos de campos - Schema

A classe schema contém uma variedade de tipos de campos que podem ser especificados na construção das tabelas:

Command	Description
<code>\$table-&gt;bigIncrements('id');</code>	Auto-incrementing UNSIGNED BIGINT (primary key) equivalent column.
<code>\$table-&gt;bigInteger('votes');</code>	BIGINT equivalent column.
<code>\$table-&gt;binary('data');</code>	BLOB equivalent column.
<code>\$table-&gt;boolean('confirmed');</code>	BOOLEAN equivalent column.
<code>\$table-&gt;char('name', 100);</code>	CHAR equivalent column with an optional length.
<code>\$table-&gt;date('created_at');</code>	DATE equivalent column.
<code>\$table-&gt;dateTime('created_at');</code>	DATETIME equivalent column.
<code>\$table-&gt;dateTimeTz('created_at');</code>	DATETIME (with timezone) equivalent column.
<code>\$table-&gt;decimal('amount', 8, 2);</code>	DECIMAL equivalent column with a precision (total digits) and scale (decimal digits).
<code>\$table-&gt;double('amount', 8, 2);</code>	DOUBLE equivalent column with a precision (total digits) and scale (decimal digits).
<code>\$table-&gt;enum('level', ['easy', 'hard']);</code>	ENUM equivalent column.
<code>\$table-&gt;float('amount', 8, 2);</code>	FLOAT equivalent column with a precision (total digits) and scale (decimal digits).
<code>\$table-&gt;geometry('positions');</code>	GEOMETRY equivalent column.
<code>\$table-&gt;geometryCollection('positions');</code>	GEOMETRYCOLLECTION equivalent column.
<code>\$table-&gt;increments('id');</code>	Auto-incrementing UNSIGNED INTEGER (primary key) equivalent column.
<code>\$table-&gt;integer('votes');</code>	INTEGER equivalent column.
<code>\$table-&gt;ipAddress('visitor');</code>	IP address equivalent column.
<code>\$table-&gt;json('options');</code>	JSON equivalent column.

Command	Description
<code>\$table-&gt;jsonb('options');</code>	JSONB equivalent column.
<code>\$table-&gt;lineString('positions');</code>	LINESTRING equivalent column.
<code>\$table-&gt;longText('description');</code>	LONGTEXT equivalent column.
<code>\$table-&gt;macAddress('device');</code>	MAC address equivalent column.
<code>\$table-&gt;mediumIncrements('id');</code>	Auto-incrementing UNSIGNED MEDIUMINT (primary key) equivalent column.
<code>\$table-&gt;mediumInteger('votes');</code>	MEDIUMINT equivalent column.
<code>\$table-&gt;mediumText('description');</code>	MEDIUMTEXT equivalent column.
<code>\$table-&gt;morphs('taggable');</code>	Adds taggable_id UNSIGNED BIGINT and taggable_type VARCHAR equivalent columns.
<code>\$table-&gt;multiLineString('positions');</code>	MULTILINESTRING equivalent column.
<code>\$table-&gt;multiPoint('positions');</code>	MULTIPOINT equivalent column.
<code>\$table-&gt;multiPolygon('positions');</code>	MULTIPOLYGON equivalent column.
<code>\$table-&gt;nullableMorphs('taggable');</code>	Adds nullable versions of morphs() columns.
<code>\$table-&gt;nullableTimestamps();</code>	Alias of timestamps() method.
<code>\$table-&gt;point('position');</code>	POINT equivalent column.
<code>\$table-&gt;polygon('positions');</code>	POLYGON equivalent column.
<code>\$table-&gt;rememberToken();</code>	Adds a nullable remember_token VARCHAR(100) equivalent column.
<code>\$table-&gt;smallIncrements('id');</code>	Auto-incrementing UNSIGNED SMALLINT (primary key) equivalent column.
<code>\$table-&gt;smallInteger('votes');</code>	SMALLINT equivalent column.
<code>\$table-&gt;softDeletes();</code>	Adds a nullable deleted_at TIMESTAMP equivalent column for soft deletes.
<code>\$table-&gt;softDeletesTz();</code>	Adds a nullable deleted_at TIMESTAMP (with timezone) equivalent column for soft deletes.
<code>\$table-&gt;string('name', 100);</code>	VARCHAR equivalent column with a optional length.

Command	Description
<code>\$table-&gt;text('description');</code>	TEXT equivalent column.
<code>\$table-&gt;time('sunrise');</code>	TIME equivalent column.
<code>\$table-&gt;timeTz('sunrise');</code>	TIME (with timezone) equivalent column.
<code>\$table-&gt;timestamp('added_on');</code>	TIMESTAMP equivalent column.
<code>\$table-&gt;timestampTz('added_on');</code>	TIMESTAMP (with timezone) equivalent column.
<code>\$table-&gt;timestamps();</code>	Adds nullable created_at and updated_atTIMESTAMP equivalent columns.
<code>\$table-&gt;timestampsTz();</code>	Adds nullable created_at and updated_atTIMESTAMP (with timezone) equivalent columns.
<code>\$table-&gt;tinyIncrements('id');</code>	Auto-incrementing UNSIGNED TINYINT (primary key) equivalent column.
<code>\$table-&gt;tinyInteger('votes');</code>	TINYINT equivalent column.
<code>\$table-&gt;unsignedBigInteger('votes');</code>	UNSIGNED BIGINT equivalent column.
<code>\$table-&gt;unsignedDecimal('amount', 8, 2);</code>	UNSIGNED DECIMAL equivalent column with a precision (total digits) and scale (decimal digits).
<code>\$table-&gt;unsignedInteger('votes');</code>	UNSIGNED INTEGER equivalent column.
<code>\$table-&gt;unsignedMediumInteger('votes');</code>	UNSIGNED MEDIUMINT equivalent column.
<code>\$table-&gt;unsignedSmallInteger('votes');</code>	UNSIGNED SMALLINT equivalent column.
<code>\$table-&gt;unsignedTinyInteger('votes');</code>	UNSIGNED TINYINT equivalent column.
<code>\$table-&gt;uuid('id');</code>	UUID equivalent column.
<code>\$table-&gt;year('birth_year');</code>	YEAR equivalent column.

## Aula 08 - Migrations específicas

### Filtrando os comandos migrate

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan | grep migrate
migrate                Run the database migrations
migrate:fresh           Drop all tables and re-run all migrations
migrate:install         Create the migration repository
migrate:refresh         Reset and re-run all migrations
migrate:reset           Rollback all database migrations
migrate:rollback        Rollback the last database migration
migrate:status          Show the status of each migration
```

### Criando as migrations

php artisan make:migration create\_customers\_table --create=customers

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan make:migration create_customers_table --create=customers
Created Migration: 2019_02_27_211109_create_customers_table

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

php artisan make:migration create\_purchases\_table --create=purchases

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan make:migration create_purchases_table --create=purchases
Created Migration: 2019_02_27_212327_create_purchases_table

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

**database/migrations/2019\_02\_27\_211109\_create\_customers\_table.php**

```
<?php
```

```
use Illuminate\Support\Facades\Schema;
use Illuminate\Database\Schema\Blueprint;
use Illuminate\Database\Migrations\Migration;
```

```
class CreateCustomersTable extends Migration
{
    public function up()
    {
        Schema::create('customers', function (Blueprint $table) {
            $table->increments('id');
            $table->string('name', 150);
            $table->string('city', 50);
            $table->string('state', 2);
            $table->datetime('birthdate');
            $table->boolean('special_customer');
            $table->timestamps();
        });
    }

    public function down()
    {
        Schema::dropIfExists('customers');
    }
}
```

database/migrations/2019\_02\_27\_212327\_create\_purchases\_table.php

```
<?php
```

```
use Illuminate\Support\Facades\Schema;
use Illuminate\Database\Schema\Blueprint;
use Illuminate\Database\Migrations\Migration;
```

```
class CreatePurchasesTable extends Migration
{
    public function up()
    {
        Schema::create('purchases', function (Blueprint $table) {
            $table->increments('id');
            $table->integer('customer_id')->unsigned();
            $table->string('amount', 10);
            $table->string('description');
            $table->timestamps();
        });
    }

    public function down()
    {
        Schema::dropIfExists('purchases');
    }
}
```

## Criando as tabelas

php artisan migrate

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan migrate
Migration table created successfully.
Migrating: 2014_10_12_000000_create_users_table
Migrated: 2014_10_12_000000_create_users_table
Migrating: 2014_10_12_100000_create_password_resets_table
Migrated: 2014_10_12_100000_create_password_resets_table
Migrating: 2019_02_27_211109_create_customers_table
Migrated: 2019_02_27_211109_create_customers_table
Migrating: 2019_02_27_212327_create_purchases_table
Migrated: 2019_02_27_212327_create_purchases_table

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

## Aula 09 - Model Factories

### Criando as models

php make:model Customer

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan make:model Customer
Model created successfully.

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

php make:model Purchase

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan make:model Purchase
Model created successfully.

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

### Inserindo um registro com o tinker

php artisan tinker

```
C:\laragon\www\laravel53-codecasts>php artisan tinker
Psy Shell v0.9.9 (PHP 7.3.1 64-bit cli) by Justin Hileman
>>> $c = new \App\Customer;
=> App\Customer {#2921}
>>> $c->name = 'vedovelli';
=> "vedovelli"
>>> $c->city = 'Santo Andre';
=> "Santo Andre"
>>> $c->state='SP';
=> "SP"
>>> $c->special_customer = true;
=> true
>>> $c->birthdate = '1974-08-07 00:00:00';
=> "1974-08-07 00:00:00"
>>> $c->save();
=> true
>>>
```

Showing rows 0 - 0 (1 total, Query took 0.0000 seconds.)

SELECT \* FROM `customers`

Profiling [Edit inline] [Edit] [Explain SQL] [C]

## Criando uma factory

`php artisan make:factory CustomerFactory`

## Usando a factory para criar registros aleatórios

**database/Factory/CustomerFactory.php**

```
<?php
```

```
use Faker\Generator as Faker;
```

```
$factory->define(App\Customer::class, function (Faker $faker) {
    return [
        'name' => $faker->name,
        'city' => $faker->city,
        'state' => $faker->stateAbbr,
        'birthdate' => $faker->datetime(),
        'special_customer' => $faker->boolean
    ];
});
```

No terminal:

```
factory(App\Customer::class, 50)->create();
```

```

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan tinker
Psy Shell v0.9.9 (PHP 7.3.1 - cli) by Justin Hileman
factory(App\Customer::class, 50)->create();
=> Illuminate\Database\Eloquent\Collection {#2948
  all: [
    App\Customer {#2944
      name: "Orville Klocko II",
      city: "Krajcikport",

## Formatters

Each of the generator properties (like name, address, and lorem) are called "formatters". A faker generator has many of them, packaged in "providers". Here is a list of the bundled formatters in the default locale.

### Faker\Provider\Base

```
randomDigit           // 7
randomDigitNotNull    // 5
randomNumber($nbDigits = NULL, $strict = false) // 79907610
randomFloat($nbMaxDecimals = NULL, $min = 0, $max = NULL) // 48.8932
numberBetween($min = 1000, $max = 9000) // 8567
randomLetter          // 'b'

// returns randomly ordered subsequence of a provided array

randomElements($array = array ('a','b','c'), $count = 1) // array('c')
randomElement($array = array ('a','b','c')) // 'b'
shuffle('hello, world') // 'rlo,h eoldlw'
shuffle(array(1, 2, 3)) // array(2, 1, 3)
numerify('Hello ###') // 'Hello 609'
lexify('Hello ???') // 'Hello wgt'
bothify('Hello ##??') // 'Hello 42jz'
asciify('Hello ***') // 'Hello R6+'
regexify('[A-Z0-9._%+-]+@[A-Z0-9.-]+\.[A-Z]{2,4}'); // sm0@y8k96a.ej
```

### Faker\Provider\Lorem

```
word // 'aut'
words($nb = 3, $asText = false) // array('porro', 'sed', 'magni')
sentence($nbWords = 6, $variableNbWords = true) // 'Sit vitae voluptas sint non voluptates.'
sentences($nb = 3, $asText = false) // array('Optio quos qui illo error.', 'Laborum vero a officia id corporis.', 'Saepe provident esse hic eligendi.')
paragraph($nbSentences = 3, $variableNbSentences = true) // 'Ut ab voluptas sed a nam. Sint autem inventore aut officia aut aut blanditiis. Ducimus eos odit amet et est ut eum.'
```

```
paragraphs($nb = 3, $asText = false)           // array('Quidem ut sunt et  
quidem est accusamus aut. Fuga est placeat rerum ut. Enim ex eveniet facere  
sunt.', 'Aut nam et eum architecto fugit repellendus illo. Qui ex esse  
veritatis.', 'Possimus omnis aut incidunt sunt. Asperiores incidunt iure sequi cum  
culpa rem. Rerum exercitationem est rem.')  
text($maxNbChars = 200)                         // 'Fuga totam reiciendis qui  
architecto fugiat nemo. Consequatur recusandae qui cupiditate eos quod.'
```

#### Faker\Provider\en\_US\Person

```
title($gender = null|'male'|'female') // 'Ms.'
titleMale // 'Mr.'
titleFemale // 'Ms.'
suffix // 'Jr.'
name($gender = null|'male'|'female') // 'Dr. Zane Stroman'
firstName($gender = null|'male'|'female') // 'Maynard'
firstNameMale // 'Maynard'
firstNameFemale // 'Rachel'
lastName // 'Zulauf'
```

#### Faker\Provider\en\_US\Address

```
cityPrefix // 'Lake'
secondaryAddress // 'Suite 961'
state // 'NewMexico'
stateAbbr // 'OH'
citySuffix // 'borough'
streetSuffix // 'Keys'
buildingNumber // '484'
city // 'West Judge'
streetName // 'Keegan Trail'
streetAddress // '439 Karley Loaf Suite 897'
postcode // '17916'
address // '8888 Cummings Vista Apt. 101, Susanbury,
NY 95473'
country // 'Falkland Islands (Malvinas)'
latitude($min = -90, $max = 90) // 77.147489
longitude($min = -180, $max = 180) // 86.211205
```

#### Faker\Provider\en\_US\PhoneNumber

```
phoneNumber // '201-886-0269 x3767'
tollFreePhoneNumber // '(888) 937-7238'
e164PhoneNumber // '+27113456789'
```

#### Faker\Provider\en\_US\Company

```
catchPhrase // 'Monitored regional contingency'
bs // 'e-enable robust architectures'
company // 'Bogan-Treutel'
companySuffix // 'and Sons'
jobTitle // 'Cashier'
```

#### Faker\Provider\en\_US\Text

```
realText($maxNbChars = 200, $indexSize = 2) // "And yet I wish you could manage
it?) 'And what are they made of?' Alice asked in a shrill, passionate voice.
'Would YOU like cats if you were never even spoke to Time!' 'Perhaps not,' Alice
replied."
```

## Faker\Provider\DateTime

```
unixTime($max = 'now') // 58781813
dateTime($max = 'now', $timezone = null) // DateTime('2008-04-25 08:37:17', 'UTC')
dateTimeAD($max = 'now', $timezone = null) // DateTime('1800-04-29 20:38:49',
'Europe/Paris')
iso8601($max = 'now') // '1978-12-09T10:10:29+0000'
date($format = 'Y-m-d', $max = 'now') // '1979-06-09'
time($format = 'H:i:s', $max = 'now') // '20:49:42'
dateTimeBetween($startDate = '-30 years', $endDate = 'now', $timezone = null) //
DateTime('2003-03-15 02:00:49', 'Africa/Lagos')
dateTimeInInterval($startDate = '-30 years', $interval = '+ 5 days', $timezone =
null) // DateTime('2003-03-15 02:00:49', 'Antartica/Vostok')
dateTimeThisCentury($max = 'now', $timezone = null) // DateTime('1915-05-30
19:28:21', 'UTC')
dateTimeThisDecade($max = 'now', $timezone = null) // DateTime('2007-05-29
22:30:48', 'Europe/Paris')
dateTimeThisYear($max = 'now', $timezone = null) // DateTime('2011-02-27
20:52:14', 'Africa/Lagos')
dateTimeThisMonth($max = 'now', $timezone = null) // DateTime('2011-10-23
13:46:23', 'Antarctica/Vostok')
amPm($max = 'now') // 'pm'
dayOfMonth($max = 'now') // '04'
dayOfWeek($max = 'now') // 'Friday'
month($max = 'now') // '06'
monthName($max = 'now') // 'January'
year($max = 'now') // '1993'
century // 'VI'
timezone // 'Europe/Paris'
```

Methods accepting a \$timezone argument default to date\_default\_timezone\_get(). You can pass a custom timezone string to each method, or define a custom timezone for all time methods at once using \$faker::setDefaultTimezone(\$timezone).

## Faker\Provider\Internet

```
email // 'tkshlerin@collins.com'
safeEmail // 'king.alford@example.org'
freeEmail // 'bradley72@gmail.com'
companyEmail // 'russel.durward@mcdermott.org'
freeEmailDomain // 'yahoo.com'
safeEmailDomain // 'example.org'

macAddress // '43:85:B7:08:10:CA'
```

## Faker\Provider\UserAgent

```
userAgent          // 'Mozilla/5.0 (Windows CE) AppleWebKit/5350 (KHTML, like
Gecko) Chrome/13.0.888.0 Safari/5350'
chrome             // 'Mozilla/5.0 (Macintosh; PPC Mac OS X 10_6_5)
AppleWebKit/5312 (KHTML, like Gecko) Chrome/14.0.894.0 Safari/5312'
firefox            // 'Mozilla/5.0 (X11; Linux i686; rv:7.0) Gecko/20101231
Firefox/3.6'
safari             // 'Mozilla/5.0 (Macintosh; U; PPC Mac OS X 10_7_1 rv:3.0;
en-US) AppleWebKit/534.11.3 (KHTML, like Gecko) Version/4.0 Safari/534.11.3'
opera              // 'Opera/8.25 (Windows NT 5.1; en-US) Presto/2.9.188
Version/10.00'
internetExplorer   // 'Mozilla/5.0 (compatible; MSIE 7.0; Windows 98; Win 9x
4.90; Trident/3.0)'
```

## Faker\Provider\Payment

```
creditCardType      // 'MasterCard'
creditCardNumber     // '4485480221084675'
creditCardExpirationDate // 04/13
creditCardExpirationDateString // '04/13'
creditCardDetails    // array('MasterCard', '4485480221084675', 'Aleksander
Nowak', '04/13')
// Generates a random IBAN. Set $countryCode to null for a random country
iban($countryCode)   // 'IT31A8497112740YZ575DJ28BP4'
swiftBicNumber        // 'RZTIAT22263'
```

## Faker\Provider\Color

```
hexcolor           // '#fa3cc2'
rgbcolor            // '0,255,122'
rgbColorAsArray     // array(0,255,122)
rgbCssColor         // 'rgb(0,255,122)'
safeColorName       // 'fuchsia'
colorName           // 'Gainsbor'
```

## Faker\Provider\File

```
fileExtension       // 'avi'
mimeType             // 'video/x-msvideo'
// Copy a random file from the source to the target directory and returns the
fullpath or filename
file($sourceDir = '/tmp', $targetDir = '/tmp') //
'/path/to/targetDir/13b73edae8443990be1aa8f1a483bc27.jpg'
file($sourceDir, $targetDir, false) // '13b73edae8443990be1aa8f1a483bc27.jpg'
```

## Faker\Provider\Image

```
// Image generation provided by LoremPixel (http://loempixel.com/)
imageUrl($width = 640, $height = 480) // 'http://loempixel.com/640/480/'
imageUrl($width, $height, 'cats')      // 'http://loempixel.com/800/600/cats/'
imageUrl($width, $height, 'cats', true, 'Faker') //
'http://loempixel.com/800/400/cats/Faker'
imageUrl($width, $height, 'cats', true, 'Faker', true) //
'http://loempixel.com/grey/800/400/cats/Faker/' Monochrome image
image($dir = '/tmp', $width = 640, $height = 480) //
'/tmp/13b73edae8443990be1aa8f1a483bc27.jpg'
image($dir, $width, $height, 'cats') //
'tmp/13b73edae8443990be1aa8f1a483bc27.jpg' it's a cat!
image($dir, $width, $height, 'cats', false) //
'13b73edae8443990be1aa8f1a483bc27.jpg' it's a filename without path
image($dir, $width, $height, 'cats', true, false) // it's a no randomize images
(default: `true`)
image($dir, $width, $height, 'cats', true, true, 'Faker') //
'tmp/13b73edae8443990be1aa8f1a483bc27.jpg' it's a cat with 'Faker' text. Default,
`null`.
```

## Faker\Provider\Uuid

```
uuid // '7e57d004-2b97-0e7a-b45f-5387367791cd'
```

## Faker\Provider\Barcode

```
ean13 // '4006381333931'
ean8   // '73513537'
isbn13 // '9790404436093'
isbn10 // '4881416324'
```

## Faker\Provider\Miscellaneous

```
boolean // false
boolean($chanceOfGettingTrue = 50) // true
md5      // 'de99a620c50f2990e87144735cd357e7'
sha1     // 'f08e7f04ca1a413807ebc47551a40a20a0b4de5c'
sha256   //
'0061e4c60dac5c1d82db0135a42e00c89ae3a333e7c26485321f24348c7e98a5'
locale   // en_UK
countryCode // UK
languageCode // en
currencyCode // EUR
emoji    // 🇬🇧
```

## Faker\Provider\Biased

```
// get a random number between 10 and 20,
// with more chances to be close to 20
biasedNumberBetween($min = 10, $max = 20, $function = 'sqrt')
```

## Faker\Provider\HtmlLorem

```
//Generate HTML document which is no more than 2 levels deep, and no more than 3
elements wide at any level.
randomHtml(2,3) // <html><head><title>Aut illo dolore et accusantium
eum.</title></head><body><form action="example.co
```

# Modifiers

Faker provides three special providers, `unique()`, `optional()`, and `valid()`, to be called before any provider.

```
// unique() forces providers to return unique values

$values = array();
for ($i=0; $i < 10; $i++) {
    // get a random digit, but always a new one, to avoid duplicates
    $values []= $faker->unique()->randomDigit;
}
print_r($values); // [4, 1, 8, 5, 0, 2, 6, 9, 7, 3]

// providers with a limited range will throw an exception when no new unique value
// can be generated

$values = array();
try {
    for ($i=0; $i < 10; $i++) {
        $values []= $faker->unique()->randomDigitNotNull;
    }
} catch (\OverflowException $e) {
    echo "There are only 9 unique digits not null, Faker can't generate 10 of
them!";
}

// you can reset the unique modifier for all providers by passing true as first
// argument

$faker->unique($reset = true)->randomDigitNotNull; // will not throw
// OverflowException since unique() was reset

// tip: unique() keeps one array of values per provider

// optional() sometimes bypasses the provider to return a default value instead
// (which defaults to NULL)

$values = array();
for ($i=0; $i < 10; $i++) {
    // get a random digit, but also null sometimes
    $values []= $faker->optional()->randomDigit;
}
print_r($values); // [1, 4, null, 9, 5, null, null, 4, 6, null]

// optional() accepts a weight argument to specify the probability of receiving
// the default value.

// 0 will always return the default value; 1 will always return the provider.
// Default weight is 0.5 (50% chance).

$faker->optional($weight = 0.1)->randomDigit; // 90% chance of NULL
$faker->optional($weight = 0.9)->randomDigit; // 10% chance of NULL

// optional() accepts a default argument to specify the default value to return.
```

```

// Defaults to NULL.

$faker->optional($weight = 0.5, $default = false)->randomDigit; // 50% chance of
FALSE
$faker->optional($weight = 0.9, $default = 'abc')->word; // 10% chance of 'abc'

// valid() only accepts valid values according to the passed validator functions
$values = array();
$evenValidator = function($digit) {
    return $digit % 2 === 0;
};
for ($i=0; $i < 10; $i++) {
    $values []= $faker->valid($evenValidator)->randomDigit;
}
print_r($values); // [0, 4, 8, 4, 2, 6, 0, 8, 8, 6]

// just like unique(), valid() throws an overflow exception when it can't generate
a valid value

$values = array();
try {
    $faker->valid($evenValidator)->randomElement(1, 3, 5, 7, 9);
} catch (\OverflowException $e) {
    echo "Can't pick an even number in that set!";
}

```

If you would like to use a modifier with a value not generated by Faker, use the `passthrough()` method. `passthrough()` simply returns whatever value it was given.

```

$faker->optional()->passthrough(mt_rand(5, 15));

```

## Aula 10 - Seeders

### Filtrando os comandos seed com grep

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan | grep seed
  db:seed          Seed the database with records
  make:seeder      Create a new seeder class

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

### Criando factory e seeder para a tabela Customer

database/Factory/CustomerFactory.php

```
<?php
```

```
use Faker\Generator as Faker;
```

```
$factory->define(App\Customer::class, function (Faker $faker) {
    return [
        'name' => $faker->name,
        'city' => $faker->city,
        'state' => $faker->stateAbbr,
        'birthdate' => $faker->datetime(),
        'special_customer' => $faker->boolean
    ];
});
```

```
php artisan make:seeder CustomersSeeder
```

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan make:seeder CustomersSeeder
Seeder created successfully.

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

### database/seeds/CustomersSeeder.php

```
<?php

use Illuminate\Database\Seeder;
use App\Customer;

class CustomersSeeder extends Seeder
{
    public function run()
    {
        Customer::truncate();
        factory(App\Customer::class, 50)->create();
    }
}
```

### database/seeds/DatabaseSeeder.php

```
<?php

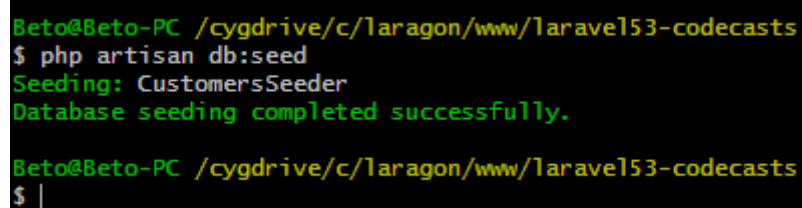

use Illuminate\Database\Seeder;

class DatabaseSeeder extends Seeder
{
    public function run()
    {
        // $this->call(UsersTableSeeder::class);
        $this->call(CustomesrSeeder::class);
    }
}
```

## Populando a tabela Customer

No terminal execute o seguinte comando:

**php artisan db:seed**

```
Beto@Beto-PC /cygdrive/c/laragon/www/larave153-codecasts
$ php artisan db:seed
Seeding: CustomersSeeder
Database seeding completed successfully.

Beto@Beto-PC /cygdrive/c/laragon/www/larave153-codecasts
$ |
```

## Criando factory e seeder para a tabela de usuários

php artisan make:seeder UsersSeeder

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan make:seeder UsersSeeder
Seeder created successfully.

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

database/seeds/UsersSeeder.php

<?php

use Illuminate\Database\Seeder;

use App\User;

class UsersSeeder extends Seeder

{

public function run()

{

User::truncate();

\$user = new User();

\$user->name = 'Fabio Vedovelli';

\$user->email = 'vedovelli@gmail.com';

\$user->password = bcrypt(123456);

\$user->email\_verified\_at = now();

\$user->save();

factory(App\User::class, 50)->create();

}

}

## database/seeds/DatabaseSeeder.php

```
<?php
```

```
use Illuminate\Database\Seeder;
```

```
class DatabaseSeeder extends Seeder
```

```
{
    public function run()
    {
        $this->call(UsersSeeder::class);
        $this->call(CustomersSeeder::class);
    }
}
```

## Populando apenas a tabela de usuários

```
php artisan db:seed --class=UsersSeeder
```

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ php artisan db:seed --class=UsersSeeder
Database seeding completed successfully.

Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts
$ |
```

## Criando o factory e o seeder para a tabela de compras

database/Factory/PurchaseFactory.php

```
<?php
```

```
use Faker\Generator as Faker;
```

```
use App\Customer;
```

```
$factory->define(App\Purchase::class, function (Faker $faker) {
```

```
    return [
```

```
        'customer_id' => $faker->numberBetween($min = 1, $max = 50),
```

```
        'amount' => $faker->randomFloat(2, 1, 400),
```

```
        'description' => $faker->sentence(),
```

```
    ];
```

```
});
```

```
php artisan make:seeder PurchasesSeeder
```

```
Beto@Beto-PC /cygdrive/c/laragon/www/larave153-codecasts
$ php artisan make:seeder PurchasesSeeder
Seeder created successfully.

Beto@Beto-PC /cygdrive/c/laragon/www/larave153-codecasts
$ |
```

#### **database/seeds/DatabaseSeeder.php**

```
<?php

use Illuminate\Database\Seeder;

class DatabaseSeeder extends Seeder
{
    public function run()
    {
        $this->call(PurchasesSeeder::class);
        $this->call(UsersSeeder::class);
        $this->call(CustomersSeeder::class);
    }
}
```

#### **database/seeds/PurchasesSeeder.php**

```
<?php

use Illuminate\Database\Seeder;
use App\Purchase;

class PurchasesSeeder extends Seeder
{
    public function run()
    {
        Purchase::truncate();
        factory(App\Purchase::class, 120)->create();
    }
}
```

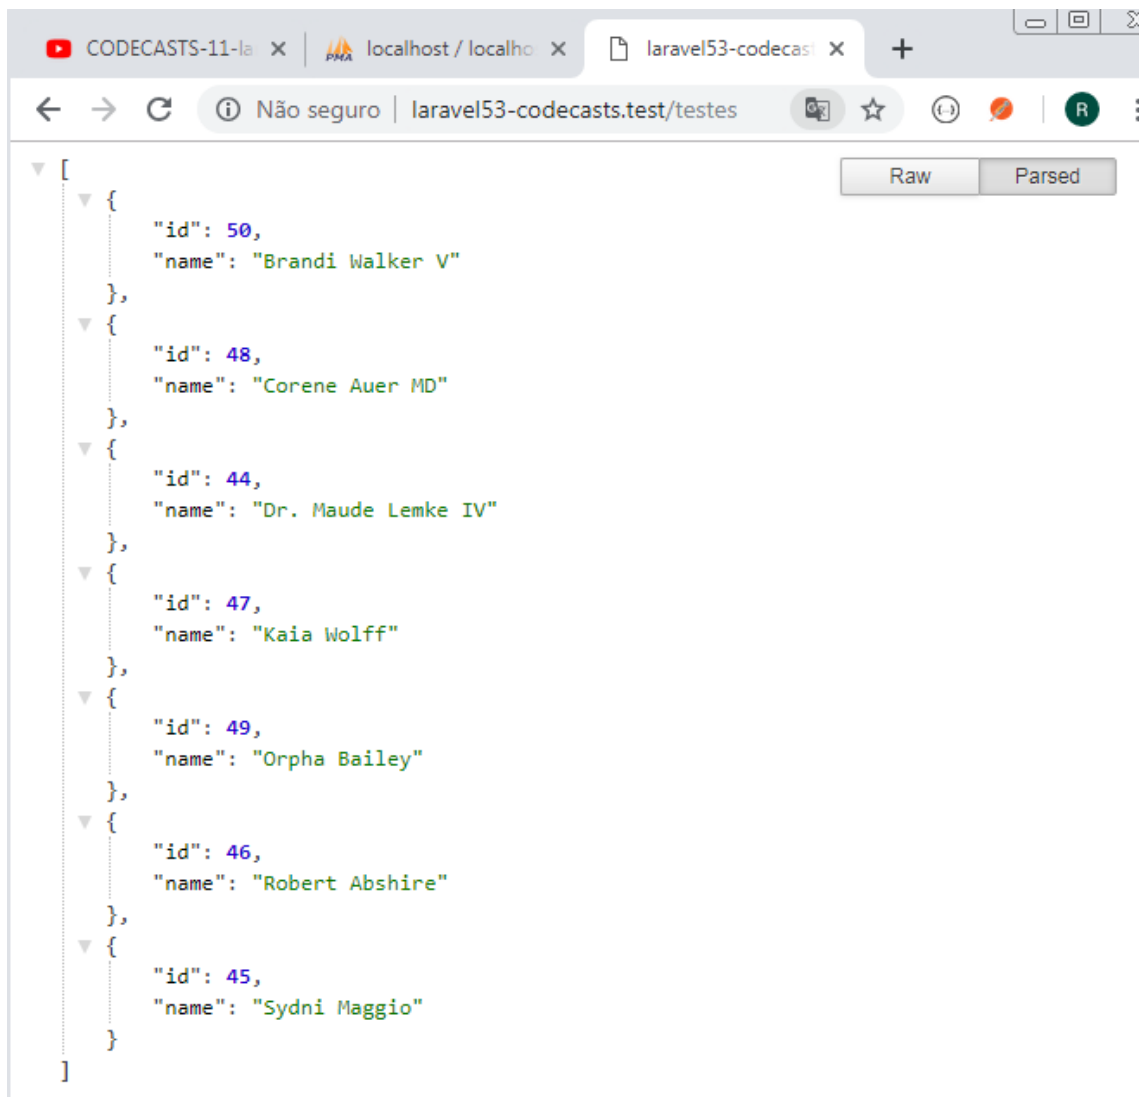

# Aula 11 - Models

## Query Builder

### routes/web.php

```
Route::get('/testes', function () {  
    $query1 = DB::table('customers')  
        ->where('id','>=', 44)  
        ->orderBy('name')  
        ->get(['id','name']);  
  
    return $query1;  
});
```

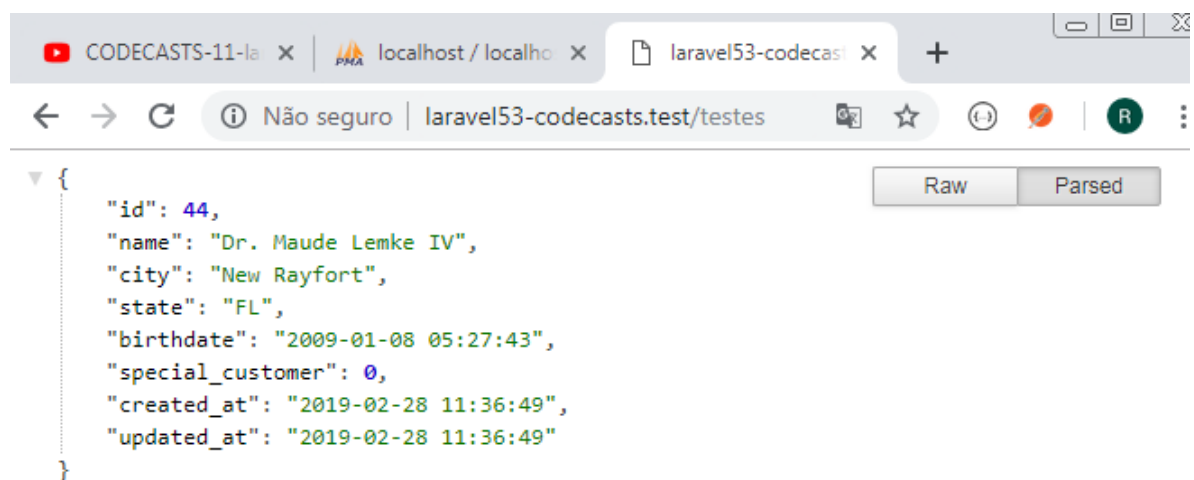

## Eloquent

### routes/web.php

```
use App\Customer;
```

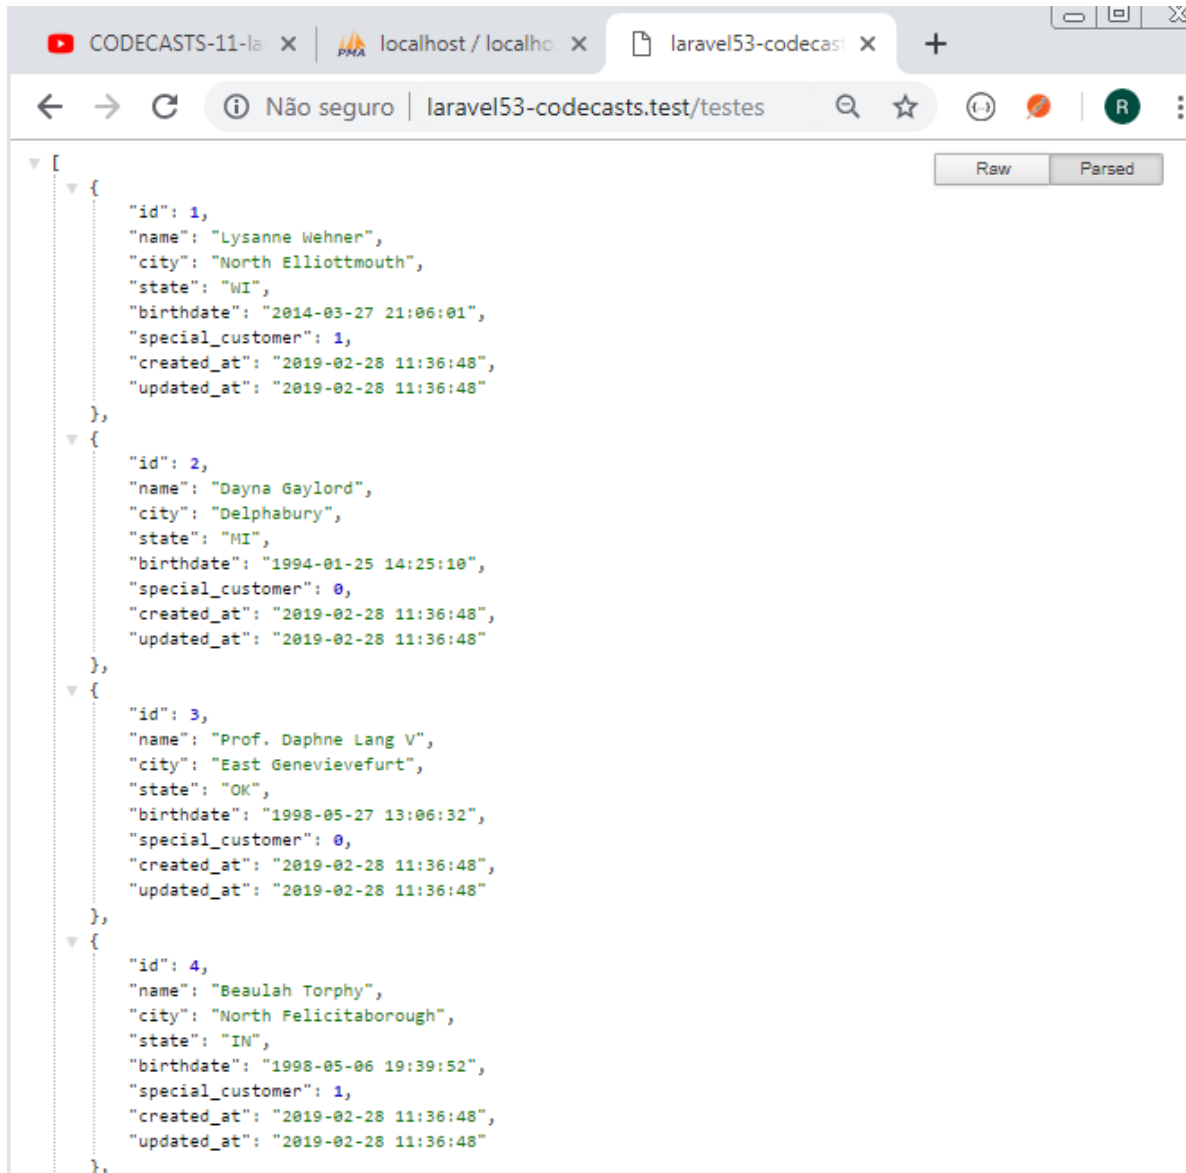

```
Route::get('/testes', function () {  
    $query2 = Customer::find(44);  
    return $query2;  
});
```

## routes/web.php

use App\Customer;

```
Route::get('/testes', function () {  
    $query3 = Customer::all();  
    return $query3;  
});
```

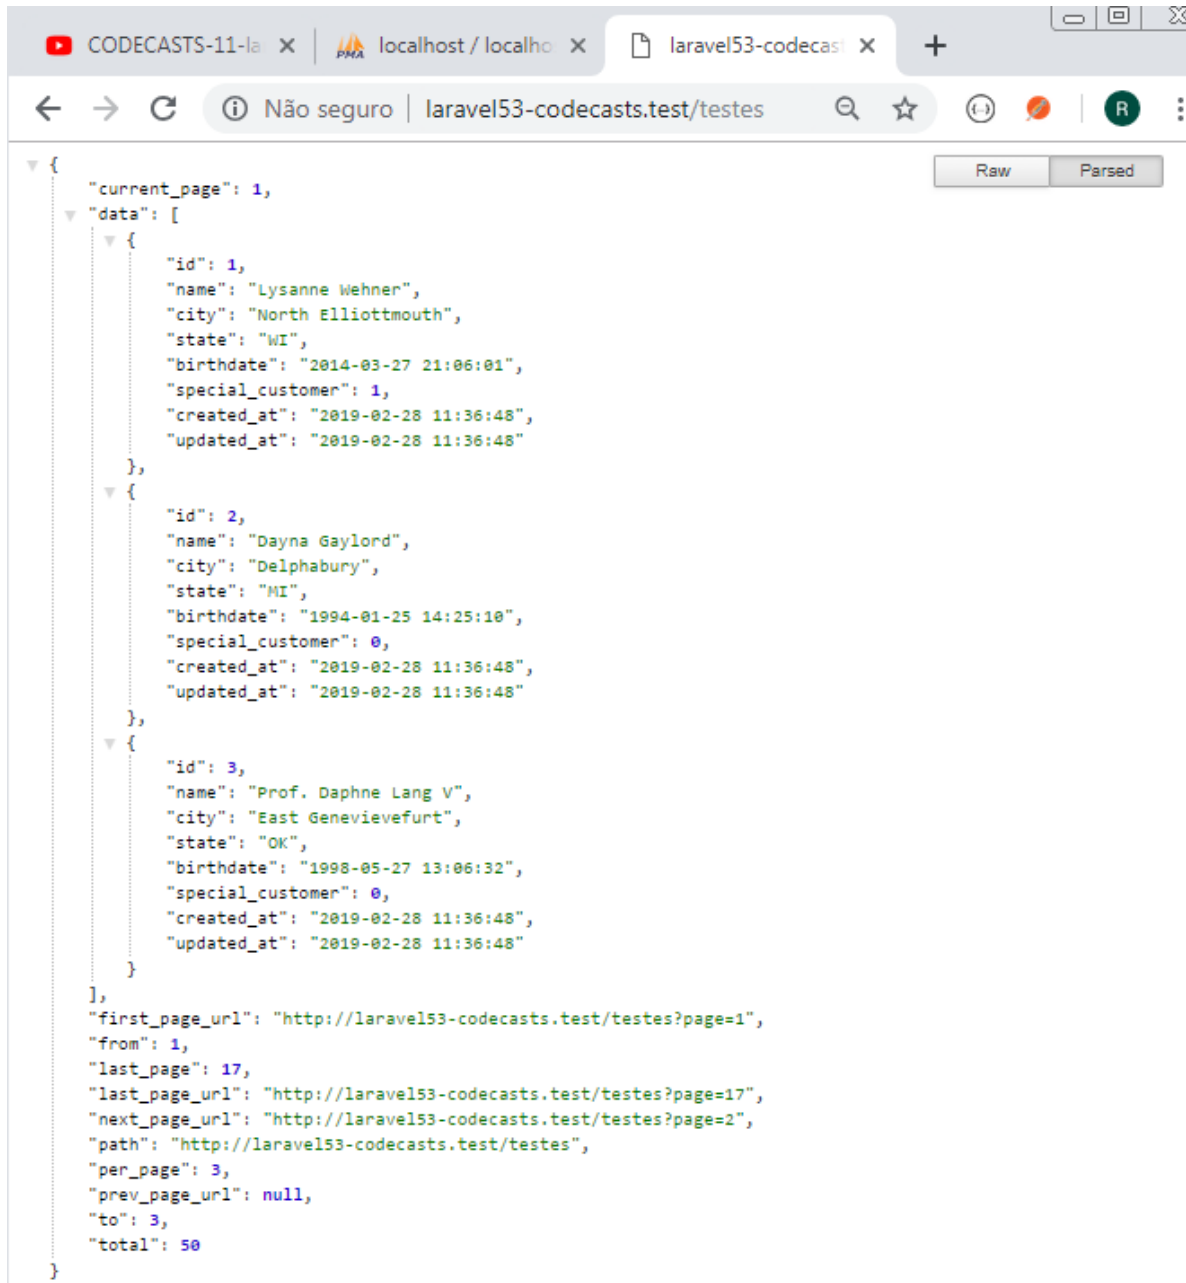

The screenshot shows a web browser window with the address bar displaying "laravel53-codecasts.test/testes". The page content shows a JSON array of four customer objects. The browser's developer tools are open, showing the JSON response in a "Raw" view. The JSON data is as follows:

```
[  
  {  
    "id": 1,  
    "name": "Lysanne Wehner",  
    "city": "North Elliottmouth",  
    "state": "WI",  
    "birthdate": "2014-03-27 21:06:01",  
    "special_customer": 1,  
    "created_at": "2019-02-28 11:36:48",  
    "updated_at": "2019-02-28 11:36:48"  
  },  
  {  
    "id": 2,  
    "name": "Dayna Gaylord",  
    "city": "Delphabury",  
    "state": "MI",  
    "birthdate": "1994-01-25 14:25:10",  
    "special_customer": 0,  
    "created_at": "2019-02-28 11:36:48",  
    "updated_at": "2019-02-28 11:36:48"  
  },  
  {  
    "id": 3,  
    "name": "Prof. Daphne Lang V",  
    "city": "East Genevievefurt",  
    "state": "OK",  
    "birthdate": "1998-05-27 13:06:32",  
    "special_customer": 0,  
    "created_at": "2019-02-28 11:36:48",  
    "updated_at": "2019-02-28 11:36:48"  
  },  
  {  
    "id": 4,  
    "name": "Beaulah Torphy",  
    "city": "North Felicita borough",  
    "state": "IN",  
    "birthdate": "1998-05-06 19:39:52",  
    "special_customer": 1,  
    "created_at": "2019-02-28 11:36:48",  
    "updated_at": "2019-02-28 11:36:48"  
  }  
]
```

## routes/web.php

use App\Customer;

```
Route::get('/testes', function () {  
    $query4 = Customer::paginate(3);  
    return $query4;  
});
```

The screenshot shows a web browser window with the address bar displaying 'laravel53-codecasts.test/testes'. The page content is a JSON response, which is expanded to show the following data:

```
{  
  "current_page": 1,  
  "data": [  
    {  
      "id": 1,  
      "name": "Lysanne Wehner",  
      "city": "North Elliottmouth",  
      "state": "WI",  
      "birthdate": "2014-03-27 21:06:01",  
      "special_customer": 1,  
      "created_at": "2019-02-28 11:36:48",  
      "updated_at": "2019-02-28 11:36:48"  
    },  
    {  
      "id": 2,  
      "name": "Dayna Gaylord",  
      "city": "Delphabury",  
      "state": "MI",

}
```

## Relacionamento de tabelas

### app/Customer.php

```
<?php

namespace App;

use Illuminate\Database\Eloquent\Model;

class Customer extends Model
{
    public function purchases(){
        // Um cliente possui muitas compras
        return $this->hasMany(Purchase::class);
    }
}
```

### routes/web.php

```
Route::get('/testes', function () {
    // Relacionamento
    $query5 = Customer::with('purchases')->get();

    return $query5;
});
```

## Compras feitas por cliente

## Aula 12 - Models - Listar registros

routes/web.php

use App\Customer;

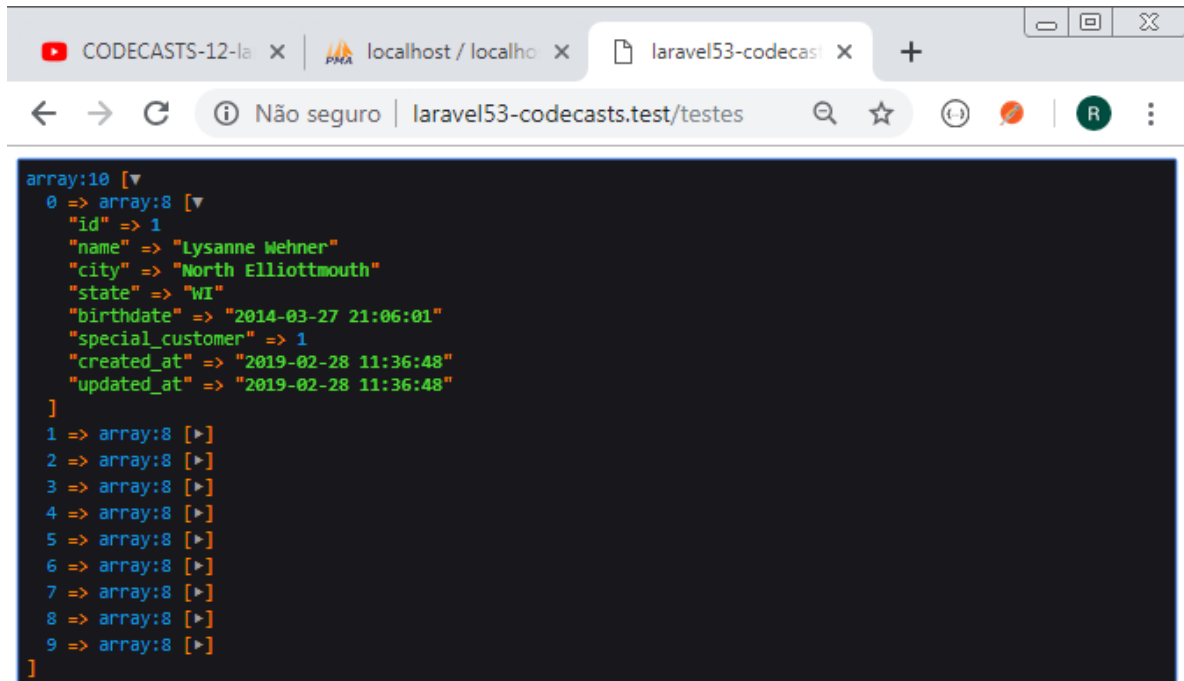

use App\Purchase;

```
Route::get('/testes', function () {  
    $customer1 = Customer::all();  
    dd($customer1->toArray());  
});
```

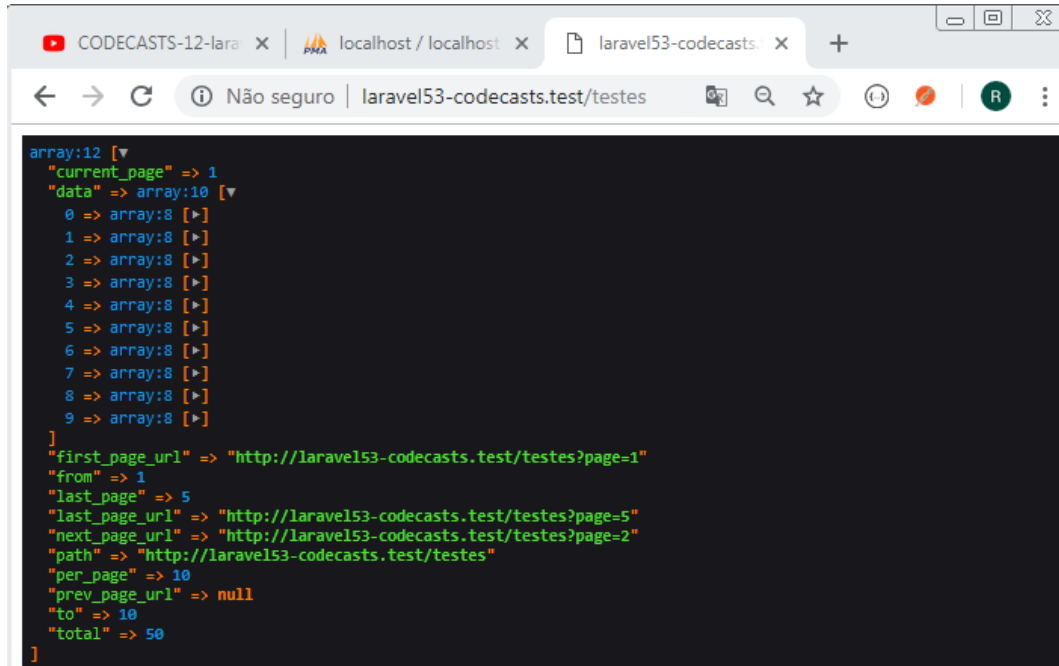

## routes/web.php

```
Route::get('/testes', function () {  
    $customer2 = Customer::with('purchases')->get();  
    dd($customer2->toArray());  
});
```

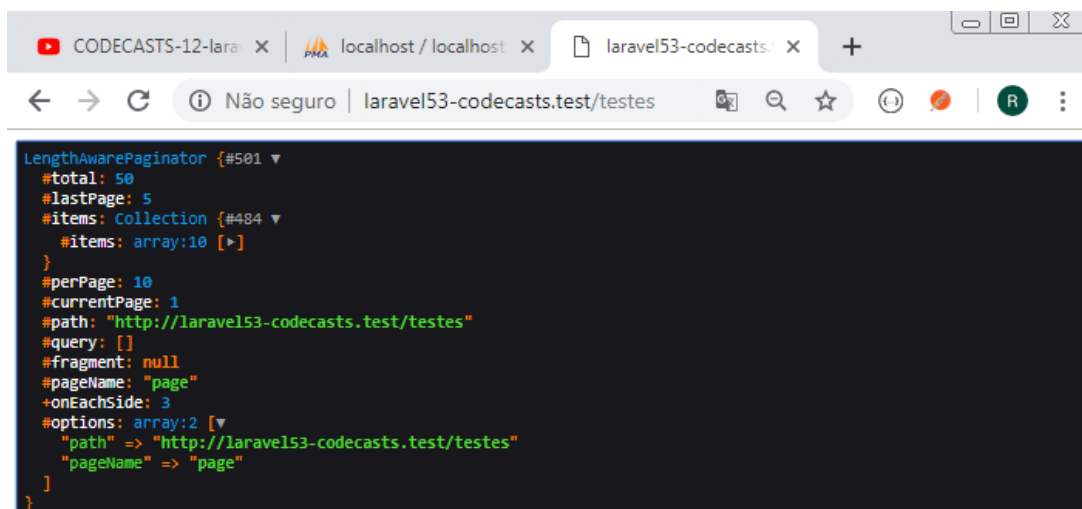

## routes/web.php

```
Route::get('/testes', function () {  
    $customer3 = Customer::take(10)->get();  
    dd($customer3->toArray());  
});
```

## routes/web.php

```
Route::get('/testes', function () {  
    $customer4 = Customer::paginate(10);  
    dd($customer4);  
});
```

## routes/web.php

```
Route::get('/testes', function () {  
    $customer5 = Customer::render();  
    echo $customer5;  
});
```

## Aula 13 - Models - Criar registros

Efetuar um truncate na tabela customer e posteriormente entrar com o seguinte código:

**routes/web.php**

```
use App\Customer;
```

```
// CRIAR NOVO CUSTOMER
```

```
Route::get('/testes2', function () {  
    $customer = new Customer();  
    $customer->name = 'Fabio Vedovelli';  
    $customer->city = 'Santo Andre';  
    $customer->state = 'SP';  
    $customer->birthdate = '1974-08-07 00:00:00';  
    $customer->special_customer = true;  
  
    $customer->save();  
    dd($customer->toArray());  
});
```

Enquanto o método save não for chamado, o objeto ficará criado apenas em memória.

```
array:8 [▼  
  "name" => "Fabio Vedovelli"  
  "city" => "Santo Andre"  
  "state" => "SP"  
  "birthdate" => "1974-08-07 00:00:00"  
  "special_customer" => true  
  "updated_at" => "2019-03-01 03:00:37"  
  "created_at" => "2019-03-01 03:00:37"  
  "id" => 1  
]
```

Showing rows 0 - 0 (1 total, Query took 0.0020 seconds.)

```
SELECT * FROM `customers`
```

        return $this->hasMany(Purchase::class);  
    }  
}
```

## Aula 14 - Models - Atualizar registros

### routes/web.php

```
use App\Customer;

Route::get('/testes4', function () {
    $data = [
        'name' => 'Pedro',
        'birthdate' => '1989-01-01 12:00:00'
    ];
    $customer = Customer::find(1);
    $customer->update($data);
    return 'Alterado com sucesso!';
});
```

### app/Customer.php

```
<?php

namespace App;

use Illuminate\Database\Eloquent\Model;

class Customer extends Model
{
    protected $fillable = [
        'name', 'city', 'state', 'birthdate', 'special_customer'
    ];

    protected $casts = [
        'special_customer' => 'boolean',
        'birthdate' => 'date'
    ];

    public function purchases(){
        // Um cliente possui muitas compras
        return $this->hasMany(Purchase::class);
    }
}
```

Alterado com sucesso!

## Aula 16 - Rotas

```
// Listar dados de todos os clientes  
// admin/clientes  
// método GET
```

```
// Listar dados de um cliente específico  
// admin/clientes/1  
// método GET
```

```
// Criar (inserir) novo cliente  
// admin/clientes  
// método POST
```

```
// Alterar dados (atualizar) de um cliente  
// admin/clientes/1  
// método PUT
```

```
// Excluir um cliente específico  
// admin/clientes/1  
// método DELETE
```

## Criando o controller para Customer

php artisan make:controller CustomerController

```
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts  
$ php artisan make:controller CustomerController  
Controller created successfully.  
  
Beto@Beto-PC /cygdrive/c/laragon/www/laravel53-codecasts  
$ |
```

## Configurando as rotas

### routes/web.php

```
Route::group(['prefix' => 'admin'], function(){

    Route::get('clientes', ['as' => 'customer.index', 'uses' => 'CustomerController@index']);

    Route::get('cliente/{id}', ['as' => 'customer.get', 'uses' => 'CustomerController@get']);

    Route::post('cliente', ['as' => 'customer.create', 'uses' => 'CustomerController@create']);

    Route::put('cliente/{id}', ['as' => 'customer.update', 'uses' => 'CustomerController@update']);

    Route::delete('cliente/{id}', ['as' => 'customer.delete', 'uses' => 'CustomerController@delete']);

});
```

### app/Http/Controllers/CustomerController.php

```
<?php

namespace App\Http\Controllers;

use Illuminate\Http\Request;

class CustomerController extends Controller
{
    public function index(){
        return 'Hello!';
    }
    public function get($id){
        return $id;
    }
    public function create(){

    }
    public function update($id){

    }
    public function delete($id){

    }
}
```

## Aula 17 - Rotas - Resource

### Criando o controller

php artisan make:controller CustomersController --resource

```
Beto@Beto-PC /cygdrive/c/laragon/www/larave153-codecasts
$ php artisan make:controller CustomersController --resource
Controller created successfully.

Beto@Beto-PC /cygdrive/c/laragon/www/larave153-codecasts
$ |
```

**app/Http/Controllers/CustomersController.php**

```
<?php
```

```
namespace App\Http\Controllers;
```

```
use Illuminate\Http\Request;
```

```
class CustomersController extends Controller
```

```
{
```

```
    public function index()
```

```
    {
```

```
        //
```

```
    }
```

```
    public function create()
```

```
    {
```

```
        //
```

```
    }
```

```
    public function store(Request $request)
```

```
    {
```

```
        //
```

```
    }
```

```
    public function show($id)
```

```
    {
```

```
        //
```

```
    }
```

```
    public function edit($id)
```

```
    {
```

```
        //
```

```
    }
```

```
    public function update(Request $request, $id)
```

```
    {
```

```
        //
```

```
    }
```

```
    public function destroy($id)
```

```
    {
```

```
        //
```

```
    }
```

```
}
```

## php artisan route:list

```
Beto@Beto-PC /cygdrive/c/laragon/www/larave153-codecasts
$ php artisan route:list
```

| Domain | Method    | URI                           | Name             | Action   | Middleware   |
